

QuickSets for WBidMax (PC, iPad, and Mac)

Many users set very complicated Constraints, Sorts, and Weights (CSW). Resetting these CSW items can be tedious.

If this is you, then you will really enjoy the latest feature of WBidMax – QuickSets.

You can give a name to your different CSW settings, and with a single click you can set your saved CSW by using QuickSets.

Let me explain further.

Here are my Constraint Settings:

Here are my Sort Settings:

Line Pay sort is typically my standard starting sort, so I am going to now save it to the QuickSets with the following Name: Res-Blank-Sun-Sat-DTW-HRL (note: you can name your QuickSet, whatever you want).

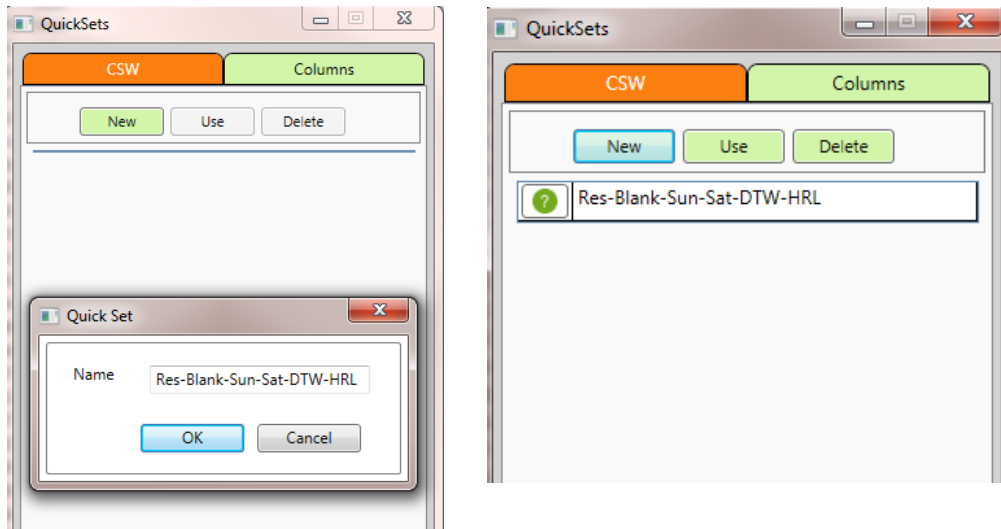

Bring up the QuickSets dialog by clicking/touching the QS button.

Then click/touch the New button.

A dialog will appear and allow you to give a name to the QuickSet that you are creating.

On the left, you can see the naming dialog for the NEW quickset. On the right, you can now see the named QuickSet (Res-Blank-Sun-Sat-DTW-HRL) in the list.

To use the QuickSet, you can just double click the QuickSet, or select the QuickSet and then click on "Use".

Columns

Note the QuickSets also has a "Columns" tab. You can create QuickSets for your favorite columns. Most of you don't know that there are 50+ different columns that can be displayed in WBidMax. The Help section has a description of the different columns.

At any rate, the procedure for using the "Columns" QuickSets is the same. Change the columns to your desired columns. Then touch "QS" to display the QuickSets dialog. Touch "Columns", and then touch NEW and give the chosen column display a Name.
